

Flexi Sleeper

Converts any eco seat into a sleeping seat

Stirling Dynamics offers a passenger sleeper solution, which can be easily installed on existing economy seats in only minutes. It provides a full flat sleeping surface when installed on a standard triple or quadruple seat row. This is an ideal solution to provide comfort in your eco class cabin on demand.

During flight, the Flexi Sleeper can be easily installed and removed by the crew without any tools. The entire unit can be stowed in the overhead bin or in a customised bag, buckled on a seat using a seat belt extension.
